

# Practical AI Skills

## A 5-Minute Introduction

Use AI tools for everyday tasks — no coding required

# How Does AI Chat Work?

Think of AI as a very smart assistant. You give it instructions (a “prompt”), and it gives you a response. The better your instructions, the better the result.

1

## You Write a Prompt

Describe what you need in plain language

2

## AI Processes It

It understands context, intent, and details

3

## You Get a Result

Text, data, ideas, or formatted content

Popular AI Tools: Claude ([claude.ai](https://claude.ai)) • ChatGPT • Microsoft Copilot • Google Gemini

# Create Images & Presentations

## Images for Slides

*"Create a professional illustration for a presentation about teamwork. Modern flat design, blue and white tones, 4 people around a table. No text."*

## Full Presentation Outline

*"Create a 6-slide presentation about Remote Work Best Practices for non-technical managers. Give me titles, 3 bullet points per slide, and visual suggestions."*

**Key tips:** Specify style & colors for images. Say "no text" to avoid garbled words. Always mention your audience for presentations.

# Write Emails & Organize Data

## Professional Emails

*"Write a friendly email to a client named Maria. Her order arrived late and damaged. Apologize, offer a replacement and 15% discount. Under 120 words."*

## Comparison Tables

*"Compare 4 video call apps (Zoom, Teams, Meet, Skype) in a table: Free Plan, Best Feature, Ease of Use. Keep it simple for non-technical people."*

**Key tips:** Include specific details (names, dates, amounts) for emails. Ask for a specific format (table, list, CSV) for data. Always review before sending!

# Summarize & Automate

## Summarize Anything

*"Summarize this report in 3 parts: (1) a one-paragraph summary, (2) key findings as bullet list, (3) recommended next steps. Simple language."*

Also try: "From this meeting transcript, extract all action items with owner and deadline."

## Simple Automations

*"Column A has names, B has department, C has sales. I need a formula for total sales per department and highlight sales below 1000. Explain each formula."*

Also try: "Create an email template where I just fill in client name, date, and link."

**Key tips:** Ask for structured output (summary + findings + next steps). For formulas, describe your spreadsheet layout. Upload files directly to Claude or ChatGPT!

# The Secret: Write Better Prompts

**The Formula: Role + Task + Context + Format + Constraints**

## **Be Specific**

Not “Write an email” but “Apology email to client, 15% discount”

## **Define Audience**

“For non-technical managers” or “for a 10-year-old”

## **Set the Format**

“As a table”, “in 3 paragraphs”, “step-by-step guide”

## **Give Context**

“I’m a small business owner”, “for a team of 20”

## **Set Constraints**

“Under 200 words”, “formal tone”, “only EU regulations”

## **Iterate!**

“Make it shorter”, “Simpler language”, “Add an example”

# Quick Reference: Copy & Paste

| I need to...        | Try this prompt                                           |
|---------------------|-----------------------------------------------------------|
| Summarize something | "Summarize this in 3 bullet points: [paste text]"         |
| Write an email      | "Write a short, friendly email to [person] about [topic]" |
| Fix my grammar      | "Proofread and fix grammar: [paste text]"                 |
| Make it simpler     | "Rewrite so a 12-year-old understands: [paste text]"      |
| Compare options     | "Compare [A] and [B] in a simple table"                   |
| Get ideas           | "Give me 5 creative ideas for [topic]"                    |
| Explain a concept   | "Explain [topic] like I'm 10, using an analogy"           |

# Start Experimenting!

There are no “wrong” prompts.  
Every interaction is a learning opportunity.
