

Practical AI Skills

A Beginner-Friendly Guide

Learn to use AI tools for everyday tasks — no coding required

What You'll Learn

Creating Images

for presentations

Building Presentations

from scratch

Fetching Data

and organizing it

Writing Emails

and messages

Summarizing Documents

and content

Simple Automations

for daily tasks

Learning Assistance

and research

Better Prompts

tips and tricks

How Does AI Chat Work?

Think of AI as a very smart assistant. You give it instructions (a “prompt”), and it gives you a response. The better your instructions, the better the result.

Popular AI Tools: Claude (claude.ai) • ChatGPT • Microsoft Copilot • Google Gemini

Creating Images

Custom visuals for your presentations in seconds

Image Generation — Prompts That Work

Presentation Cover

“Create a professional illustration for a presentation about cybersecurity. Modern flat design, blue and white tones, shield protecting a laptop. No text.”

Always specify style, colors, and “no text”

Consistent Icon Set

“Generate 4 flat icons: handshake, lightbulb, bar chart, target. Consistent style, navy blue, white background.”

Ask for “consistent style” across icons

Process Diagram

“Show a 4-step flow: Identify → Analyze → Implement → Review. Rounded boxes with arrows, corporate style, green/gray tones.”

Describe the exact layout you want

Building Presentations

Structure, outline, and draft entire decks with AI

Presentations — From Idea to Slides

Full Presentation Outline

“Create a 10-slide presentation about ‘Remote Work Best Practices’ for office managers who are not very technical. For each slide, give me: the title, 3–4 bullet points, and a visual suggestion. Keep it simple and practical.”

What you get: A complete structure with content and visual ideas, ready to build into slides.

Speaker Notes

“I have slides: Revenue, Products, Regional, Challenges, Goals. Write 4–5 sentence speaker notes for each in a confident tone.”

Document → Slides

“Convert my 2-page sustainability report into 7 slides. Extract key points, simplify language, suggest titles.”

Fetching & Organizing Data

Collect, compare, analyze, and structure information

Data Tasks — Prompts & Use Cases

Comparison Tables

“Create a comparison table of the top 5 project management tools. Compare by: price, ease of use, best for, key features. Format as a clean table.”

Analyze Feedback

“Analyze these customer comments: give me top 3 complaints, top 3 praises, and overall sentiment. [Paste data below]”

Generate Sample Data

“Generate 20 rows of employee data as CSV: Name, Department, Start Date, Salary (30k-90k), Rating (1-5). Ready for Excel.”
You can upload files (Excel, CSV, PDF) to Claude or ChatGPT and ask AI to analyze or transform your data.

Writing Emails & Messages

Draft professional communications in seconds

Emails — The Right Words, Fast

Client Apology

“Write an empathetic reply to a client whose order arrived late and damaged. Apologize, offer replacement + 15% discount. Under 150 words.”

Include specific details

Meeting Follow-up

“Follow-up email: campaign launches Mar 15, budget €25k, Sarah leads. Action items: timeline by Friday, audit by Mar 1.”

List all names and dates

Difficult Message

“Message to a colleague missing deadlines. Direct but respectful. Offer support. Warm but firm. For Slack.”

Describe the tone you want

Summarizing Documents

Turn long texts into concise, actionable summaries

Summarize Anything — In the Format You Need

Executive Summary

“Summarize this report in 3 parts: (1) one-paragraph executive summary (max 5 sentences), (2) key findings as bullet list (max 7), (3) recommended next steps. Simple language for a non-technical manager.”

Meeting → Action Items

“From this meeting transcript, extract: (1) all decisions made, (2) action items with owner and deadline, (3) unresolved questions needing follow-up.”

Simplify Technical Docs

“Rewrite this IT security policy in plain language for all employees. Avoid jargon. If a technical term is needed, explain it in parentheses. Keep same structure.”

Simple Automations

Let AI create formulas, templates, and shortcuts for you

Automate Repetitive Work

Excel / Sheets Formulas

"Column A = names, B = department, C = sales. I need: total sales per department, highlight sales below 1000 in red, summary with average/min/max. Explain each formula."

File Renaming

"I have 200 photos named IMG_3847.jpg. Rename them to Vacation_Portugal_001.jpg. Step-by-step for Windows, no extra software."

Reusable Email Templates

"I send the same email to new clients weekly. Only the client name, company, meeting date, and link change. Create a Gmail template with those 4 fields, plus a pre-send checklist."

Learning & Research

AI as your patient, always-available tutor

The Secret: Write Better Prompts

The Formula: Role + Task + Context + Format + Constraints

Be Specific

Not “Write an email” but “Apology email to client, offer 10% discount”

Set the Format

“As a table”, “in 3 paragraphs”, “as a step-by-step guide”

Set Constraints

“Under 200 words”, “formal tone”, “only EU regulations”

Give Examples

“Here’s the style I like: [example]. Write similar.”

Define Audience

“For non-technical managers” or “for a 10-year-old”

Give Context

“I’m a small business owner” or “for a team of 20”

Assign a Role

“Act as a marketing expert” or “You are a patient teacher”

Iterate!

“Make it shorter”, “Simpler language”, “Add an example”

Start Experimenting!

The better you communicate what you need,
the better results you'll get.

There are no “wrong” prompts. Every interaction is a learning opportunity.

Refer to the full guide document for all examples with detailed explanations
